

people
using ai

You have access to powerful AI tools. *Communication is how you make them useful.*

AT A GLANCE

People using ai is an AI upskilling,
training and research company
built from Nairobi.

We help professionals, entrepreneurs and teams understand AI tools, communicate with them effectively and turn their access into meaningful use.

We bring an emerging-market perspective to AI adoption, with a focus on the human skills that make technology useful.

We are *communicators.*

20+

years across marketing, strategy,
operations and commercial growth

We understand people, make ideas clear and solve business problems. Our team has spent more than 20 years doing this across marketing, strategy, operations and commercial growth in emerging markets.

Marketing

Strategy

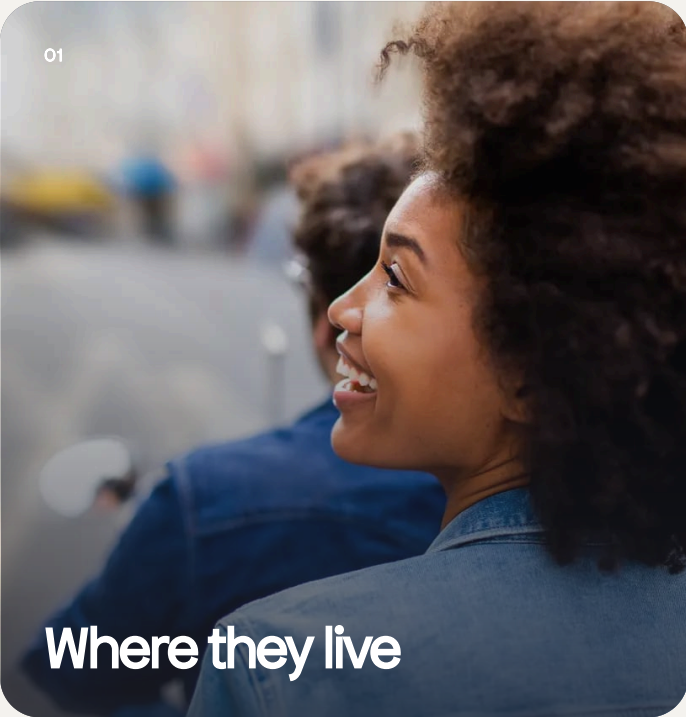

Operations

Commercial growth

AI access has gone global. *How people use it hasn't caught up.*

The way people understand, trust and use AI tools is shaped by four things:

01

Where they live

02

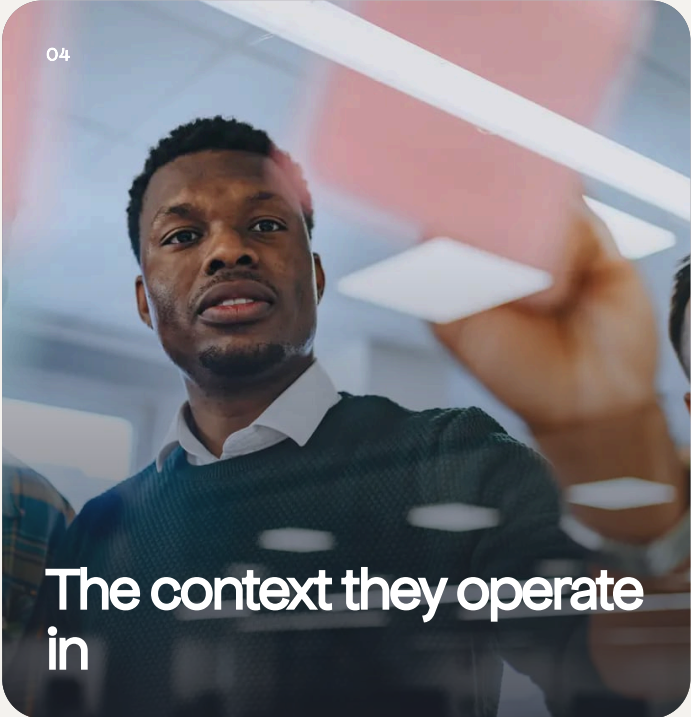

The language they speak

03

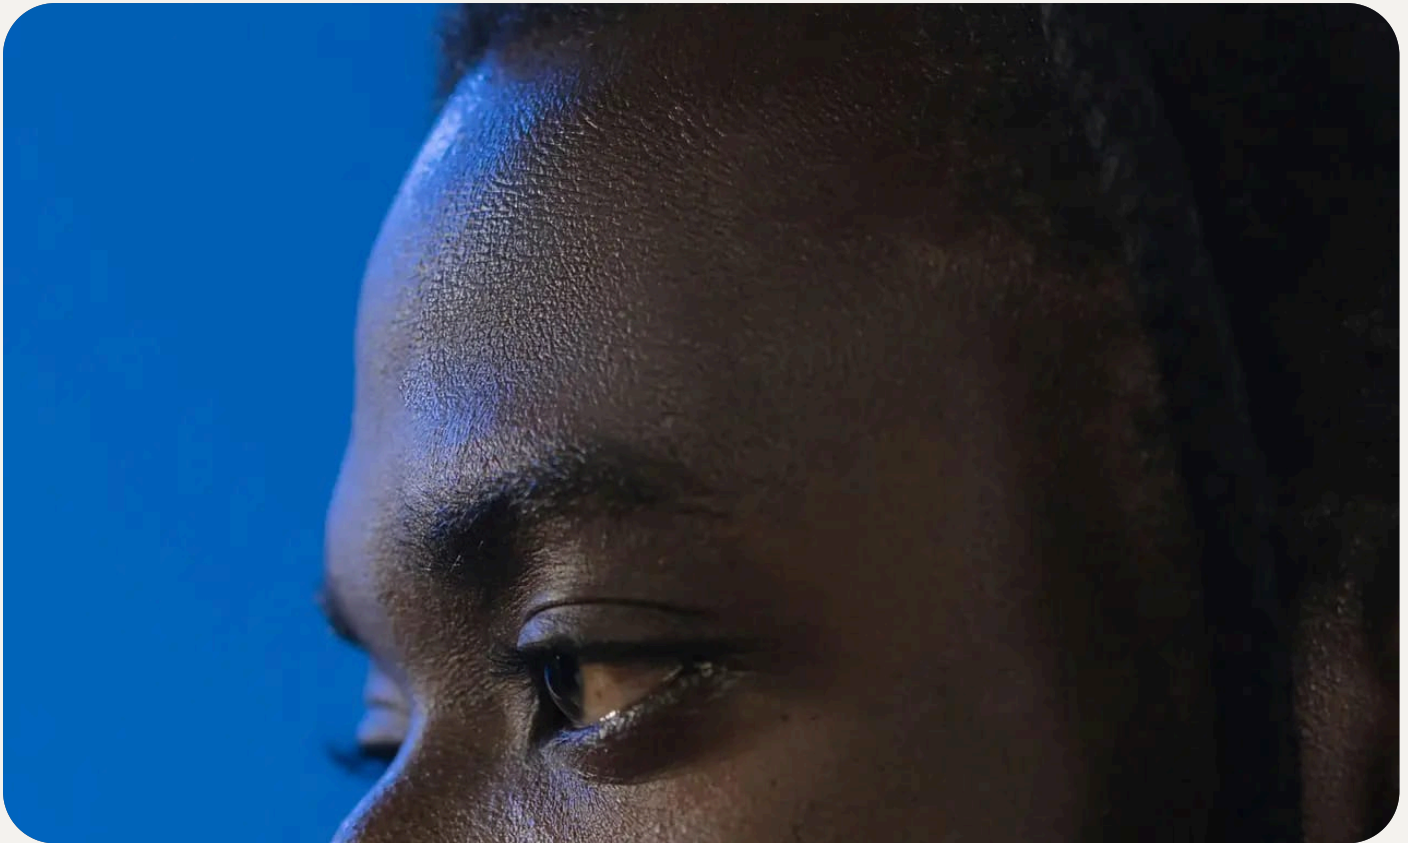

The work they do

04

The context they operate in

Language, culture, context and the way people work all shape what AI tools can do for them. People are the bridge between the technology and their reality.

An emerging-market perspective on *AI adoption*.

We combine technology, business, communication and human behaviour to make AI tools relevant to the way people live and work. Our aim is to make the process simpler: helping people understand AI, communicate with it effectively and turn their access into meaningful use.

Technology

Business

Communication

Human behaviour

Access to AI tools is not the same as knowing how to use them. *That is the gap we work in.*

Between access and active use is a *learning curve.*

You don't need to be a developer or technical expert to use AI well. Anyone with access to AI tools can learn to make them useful in the way they work. That includes:

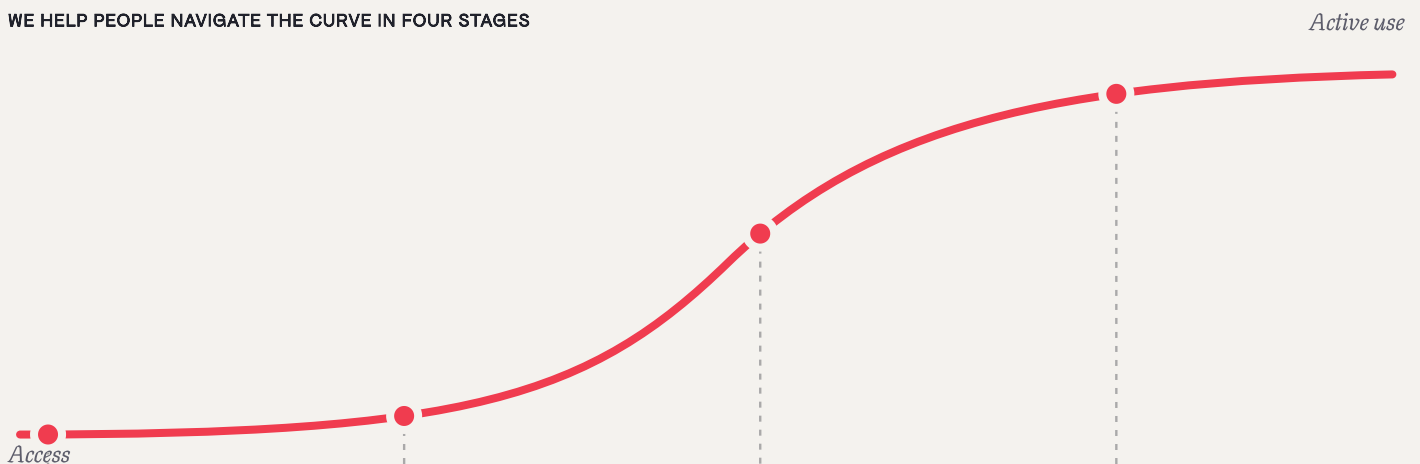

Professionals

Entrepreneurs

Freelancers

Consultants

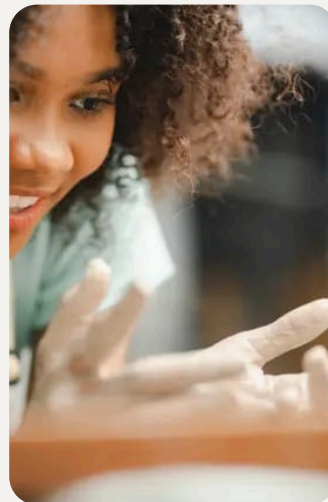

WE HELP PEOPLE NAVIGATE THE CURVE IN FOUR STAGES

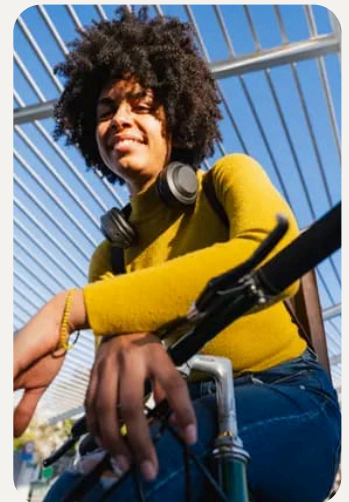

01
Understanding the
tools

02
Communicating with
them

03
Experimenting

04
Finding what works
for you

Communication

Critical thinking

Creativity

Judgement

Problem-solving

The human skills that make
technology useful.

AI tools will keep evolving. Our training and research centre on the skills people need to keep up with them, whatever the tool.

Three ways to *work with us.*

01 · For teams

Corporate Training

Custom-built, in-person AI training for your team. We assess your team's skills gaps and design training around your work and context.

- Skills-gap assessment
- Designed around your work and context
- Delivered in person

02 · For individuals

Upskilling Masterclass

A full-day, in-person masterclass in Nairobi covering AI fundamentals and sector-specific applications. Participants who complete the day are certified.

- AI fundamentals
- Sector-specific applications
- Full day, in person, with certification

03 · Free for everyone

Our community

Free learning, AI experiments, conversations and research for people figuring out how to use AI in their work.

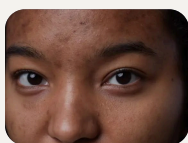

- Free learning and AI experiments
- Conversations and research
- On LinkedIn, Instagram and Substack

WITH THE UNIVERSITY OF FREIBURG

There is limited research into how AI is understood, trusted and used across *Africa and emerging markets.*

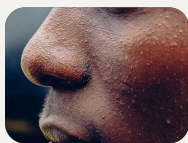

In partnership with the University of Freiburg, we are developing research through an anthropological lens to understand the people behind AI adoption in East Africa.

WHAT WE'RE EXPLORING

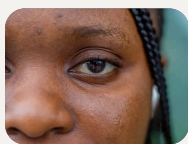

01

How people understand AI technology

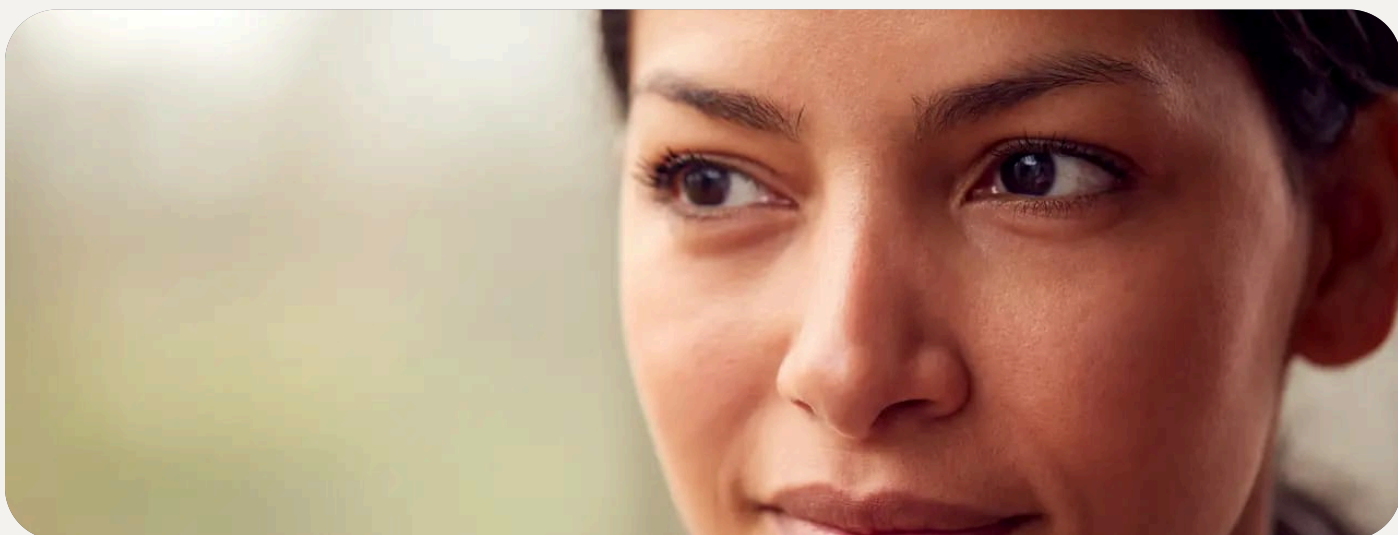

02

What shapes trust and behaviour

03

How language, culture and context influence use

Take 5 minutes to tell us how you use AI.

Every response helps shape what AI becomes for people in emerging markets. Find the survey at peopleusingai.org.

Why People using ai exists.

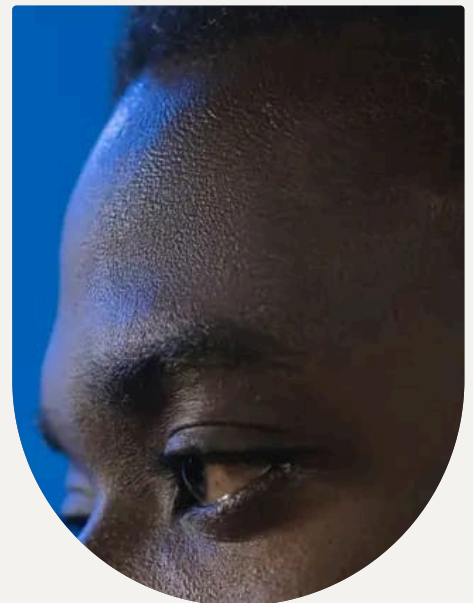

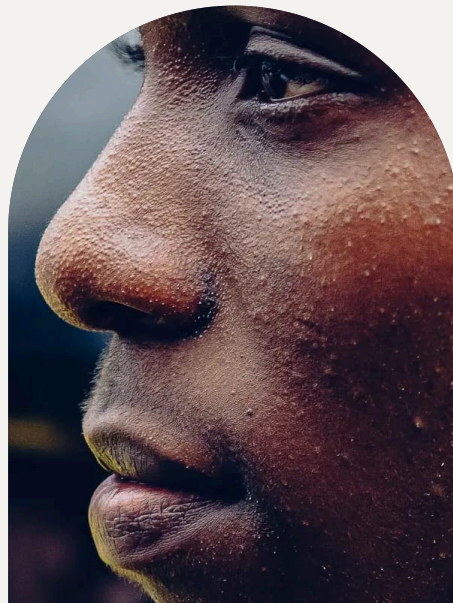

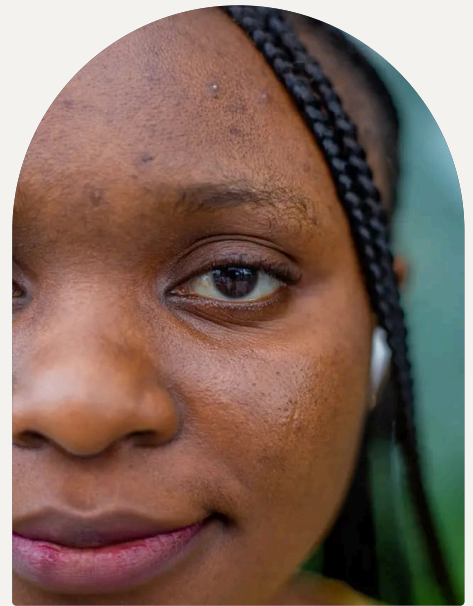

We've worked closely with technologists for years. As AI tools evolved, we found ourselves overwhelmed by the way they were explained, often with the assumption that access to the tools meant knowing how to use them.

People using ai was born from wanting a space to learn and experiment, and to build the skills needed to keep up as the technology evolves.

Today, we bring that perspective to AI upskilling, training and research.

We're building this from *Nairobi*.

With lived experience of East Africa and its rapidly growing AI ecosystem, we want to help shape what AI becomes for people in emerging markets.

Let's make AI useful.

Whether you want to build your own skills, bring AI into your team or contribute to what we're learning, there's a place to start.

01

BUILD YOUR OWN SKILLS

Upskilling Masterclass

02

BRING AI INTO YOUR TEAM

Corporate Training

03
